

The lamps used in many of today's digital projectors are costly and delicate. If not handled or installed properly equipment damage or even personnel injury may occur. There are many safety measures noted when installing a new high power Xenon lamp. Manufacturers recommend wearing protective gloves, face protector, long sleeves, thick clothing or even a specially design protective suit when installing a replacement lamp.

As part of our customer support, VDCDS offers a new lamp housing exchange and repair program for all SRX S and T 105s and 110s models. This program minimizes any hazard and concerns from you and your staff and simplifies the replacement of the lamp in your projector. The program is environmentally friendly and ensures proper disposal of the depleted lamp.

Replacement Lamp Housings including new lamp preinstalled

VDCDS P/N	Part Description	Publish Price
